

## **Human Creation, the End Times in Earth's Hot Spots and the Solution**

Human creation is living its final days in the hot spots of the Earth. Our world has become wrong due to the imbalance of civilizational development. The struggle for existence between humanity and the spirit world has become untenable. In the cycle of their wrong actions, people are fighting a fierce battle with themselves and with the outside world. Those who come as helpers are often expelled. Even demons encounter obstacles to defeat the evil force. There is a problem because of the contrasts between the rich and poverty. There are more and more poor people because of wars. Technology has soared so far that dangerous devices are being manufactured and dangerous experiments are being carried out for humanity. Peace negotiations and the disarmament of very dangerous weapons would be necessary. A strong security system should be built that is uniform throughout the planet, without becoming overly centralized. It would operate with local leadership, by compromise. The future generation must be educated through schooling, church education, reading culture (many of them only use the Internet) and education through the media. Managers need to build the right infrastructure for society to provide easier living conditions. The elderly should have adequate social care and sufficient financial benefits for a better life. Medicine should be modernised and holistic medicine should be better valued. We need to value nature more and support animal protection.
