

Physics

Physics is a brand-new way of life,

Physics is a way to view the world with different eyes.

Knowledge of how things truly are,

Knowledge of how to shape what will become.

Researchers search for answers still unknown,

Teachers pass on the guidance that helps us grow.

It is the path that leads to progress;

Without it, Creation itself would have no past.

One of the greatest values of existence,

Without it, no one could fulfill their purpose.
